The formed steel profile shall incorporate a continuous integral fin for surface contact to conventionally installed gypsum drywall. The interior surface of the formed profile shall be factory finished in white semi-gloss enamel for purposes of reflectivity. A SOFTFORMS® extruded aluminum trim permits seamless blending of the pocket edge into a GPDW ceiling.

Material.............................20ga painted steel typical
Finish................................White semi-gloss enamel

Note:
Other materials and finishes are available upon request, with some restrictions applying. Check with factory or your local Pittcon Sales Representative for your needs.

EXAMPLE DETAIL

For use with 1/2" or 5/8" GPDW ceilings.

The SLP-700-800 provides a light pocket housing for perimeter down lighting. The components are fastened to the walls so as to align with the GPDW ceiling. A flange provides a backup for the GPDW panel. Wire hangers attached to the back support help secure the housing. The SOFTFORMS® STA-075 trim is then fastened in place, taped, and spackled.
