The SWR-CD-SERIES wall reveal permits the introduction of a recessed reveal of variable depth into gypsum board walls. This allows the installation of items such as partitions directly into the wall instead of mounting by exterior methods. In cases where fire rating needs to be retained, the area behind reveal should be filled completely with fire rated thermafiber. Screws through the grooved fins must always engage with metal or wood substructure to ensure proper installation.

MATERIAL: Aluminum alloy.....3003 H-14 or equal
Finish.....Factory primed
Metal thickness......062" typical
